

Everything rides on *FAS*trolley.

Overhead conveyors by Dürr – carrying you to success.

Technologies · Systems · Solutions

Typically Dürr.

Elevated performance.

With advanced technologies, systems and solutions, Dürr is a competent partner to the automobile and automotive supplier industry worldwide. Dürr stands for process competence and customer-orientation not only in the area of painting systems but in final assembly as well.

With *FASrolley*, Dürr offers high-performance and application-oriented overhead conveyors that set new standards in flexibility and functionality. 

FASrolley – efficient conveyance.

Profitable and proven – worldwide.

The market success of the *FASrolley* overhead conveyor systems is based on continuous development and maximum reliability with reduced maintenance efforts. Whether newly installed or integrated into already existing systems – *FASrolley* means standardization based on modern quality standards. 

FASrolley – overhead conveyors by Dürr. 

FAStrolley – on track performance.

Innovation all along the line.

- **Twin Trolley System (TTS)**

With the drives being located in the rails, an onboard control is not necessary. The option to use the system as a floor conveyor, TTS inverted, makes it possible to equip the entire automobile production with one single conveyor technology. This reduces the range and number of spare parts kept in stock and results in a proven availability of over 99%. 

- **Electric Monorail System**

The Electric Monorail System is found both on pure transport sections at high speed and on work lines with adjustable rates. The variable tracking of the line through the plant allows the transport of components or even entire vehicles. 

- **Vertical Adjustment Conveyor**

All technologies can be combined with height-adjustable lifting hangers. The standardized modular concept allows individual height positions to correspond to any work cycle, implementing high ergonomic standards. 

FAS*motion* – the inductive energy and data transmission is compatible with all Dürr conveyor systems! 

FAS^{trolley} – advantages all along the line.

- Dürr offers all technologies from a single source
- Optimal technology selection through benchmarking
- Worldwide presence with uniform quality standards
- FAS^{motion} – the inductive energy and data transmission is compatible with all conveyor systems
- 70% of supply and services in final assembly from Dürr
- Customer-oriented planning with Dürr Consulting
- Efficient production processes through optimal material flow simulation
